

Numbers to 20 – ordering numbers

You will need:  a partner  20 plastic cups
 a permanent marker  20 counters or cubes

What to do:

Label the plastic cups 1 to 20. Mix them up and then put them in order from 1 to 20.

Take turns removing a cup without letting your partner see. Can they guess which one has gone? They must be able to say the number! Play 3 times each.

What to do next:

You will need the 20 cubes or counters and 1 cup. You will also need to play this game in a quiet space.

Player 1, close your eyes.

Player 2, slowly and clearly drop some of the cubes or counters into the cup, one by one.

Player 1 count the drops as you hear them. If you get confused, ask Player 1 to start again.

Say the final number to Player 1. Are you right?

Swap jobs.
