

Name: \_\_\_\_\_ Class: \_\_\_\_\_

Identify the triangles – scalene, equilateral, right-angled and isosceles.

Identify the triangles – scalene, equilateral, right-angled and isosceles.

7 All three sides are equal in length.  
What type of triangle is this? Equilateral

8 Two interior angles are the same, the other is different.  
What type of triangle is this? Isosceles

9 No sides are an equal length.  
What type of triangle is this? Scalene

10 There is one internal angle of  $90^\circ$ , the other angles are acute.  
What type of triangle is this? Right-angled

11 There is one line of symmetry.  
What type of triangle is this? Isosceles

12 All angles measure  $60^\circ$ .  
What type of triangle is this? Equilateral

13 There are three lines of symmetry.  
What type of triangle is this? Equilateral
