

How I spend my typical day.

At the moment, we are all living very differently. Staying at home is really important, so we have to find different, creative ways of filling our days! We would love to hear about some of the activities you guys are doing at the moment! List these in the first column. In the second column estimate how long you spend on this activity. Then, complete each column by converting the number of hours per day to a fraction, decimal and a percentage. (medium – spicy you could try simplifying the fraction too!)

Spicy Extension: Can you convert the numbers of hours per day to degrees of a circle (360) and show your findings on the circle below?! This is an extra spicy task, be brave, have a go!

Activity	Hours	Fraction	Decimal	Percentages	Degrees
Totals					

Spicy extension!
