

4 Magic squares

In a magic square, the sum of the numbers in each row, column and diagonal is the same.

Investigate how you can place the numbers 1 to 9 in this magic square so that the sum of each row, of each column and of each diagonal is 15.

15

Don't just have lots of guesses.

Try and think of a strategy for placing the numbers in the square.

Write your strategy down.

Once you have found one solution, can you find any others?
